▼ Background

With the rapid development of economic globalization, the transformation and upgrading of China's manufacturing industry has become inevitable. Modern manufacturing industry is developing rapidly in the direction of "high speed, precision, compound, intelligent and environmental protection", in which efficient processing plays an increasingly important role.

As the cradle of modern Chinese industry, Nanjing is the sub-center of the Yangtze River Delta economic circle. After more than 50 years of construction and development, the total scale of Nanjing automobile industry has been expanding. From the perspective of comprehensive competitive strength, system development potential and the number of world-class (Ford, Fiat, Rover) automobile dealers settled in Nanjing, Nanjing will probably be expected to become the fourth largest automobile industry base in China (outside Changchun, Shanghai and Beijing).

In this context, Ringier will set the second stop of the series of seminars on efficient processing in Nanjing, relying on the strong local industrial foundation and manufacturing resources, focusing on the application of efficient processing technology in the field of automotive manufacturing, providing intelligent solutions and high-performance processing technology for automotive and spare parts manufacturing enterprises.

▼ Highlights

▼ Who will attend

- Manufacturer of Commercial Vehicles for Passenger Use
- Manufacturer of Automotive Parts
- Machine Tool Equipment Manufacturer
- Manufacturer of Metal Processing Tools
- Robot, Automation Solution Provider
- Automation Systems and Equipment Manufacturers
- Associations, Universities and Consulting Institutions

- German Industry 4.0 Helps China's Manufacturing Industry Upgrade
- Current Situation and Trend of Tool Industry in China
- New Era High Efficiency Cutting Solution
- Development Status and Trend of Five-Axis CNC Machining Center
- How to use full sequence processing in the field of passenger car transmission gear processing
- MES Helps Automobile Manufacturing Industry to Achieve High Efficiency Processing
- Application of New Cemented Carbide Tools in Engine Manufacturing
- Innovative Application of Metal Processing Fluids in Industrial Manufacturing
- Electron Beam Welding Technology in Gear Production
- From Single Machine Tool Component to Automation Technology
- Development and application of compound fine blanking forming equipment
- Application of Robot Laser Online Detection Technology in Automotive Welding Line

▼ About Us

Ringier Events

Connecting industry through information exchange!

Ringier Events covers the industries of plastics, food, personal care, medicine & health-care, nonwovens, coatings & ink, automobile, metal, mold & die, package, composite material, and the latest technologies at over 20 high levels technical conferences held each year, and brings key executives responsible for testing, evaluating, recommending and purchasing equipment, systems and material on behalf of their companies, quality speakers and representations from sponsors together create a valuable platform where information can be exchanged, new business contacts made.

For more information, please visit: www.ringierevents.com
